

Rigidlock

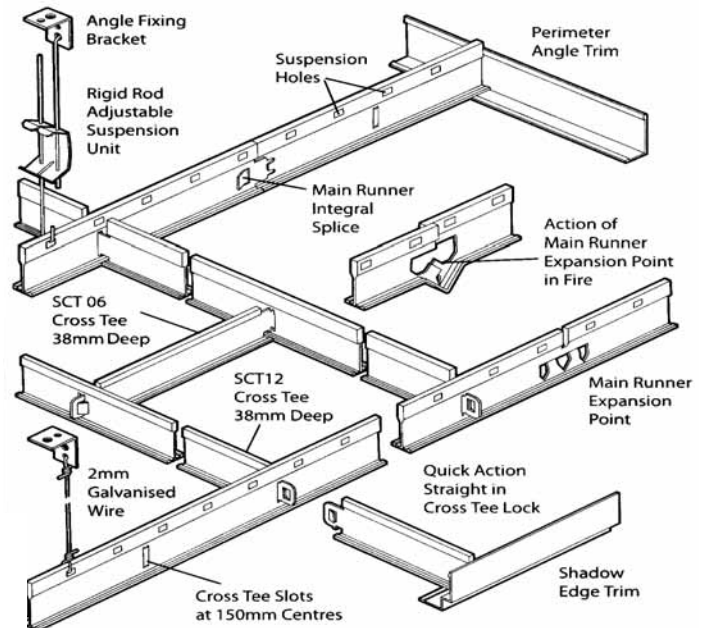

Exposed Grid – 15mm Face

RIGIDLOCK

Exposed Grid - 15mm table

A system of Main Runners and Cross Tees which interlock to provide accurate 1200mm x 600mm + 600mm x 600mm modules. Exposed Face available in White, Colours & Mirror Finishes.

Rigidlock 15mm is a narrow table metal exposed suspended ceiling grid system designed specifically for close tolerance lay-in panels and tiles.

It satisfies the needs of designers and contractors by being reliable, flexible and easily fitted. The narrow table blends into the overall look of the finished ceiling.

Whilst creating this attractive effect, it retains all the proven advantages of interlocking main and cross tees that snap lock together. This allows contractors to complete ceiling installations with the minimum amount of time and effort.

The grid main body is manufactured from hot-dipped galvanised steel to BS EN 10346 and is capped in either aluminium or steel in a polyester finish in a variety of colours.

It conforms to EN 13964 Suspended Ceiling Requirements and Test Methods.

It has been tested in accordance with EN13501-2: 2002 Classification of Reaction to Fire Performance and has also been successfully fire tested or assessed to BS 476: Pt 23 1987 for a period of 60 minutes.
